

Chest X-Ray Report

Patient Information:

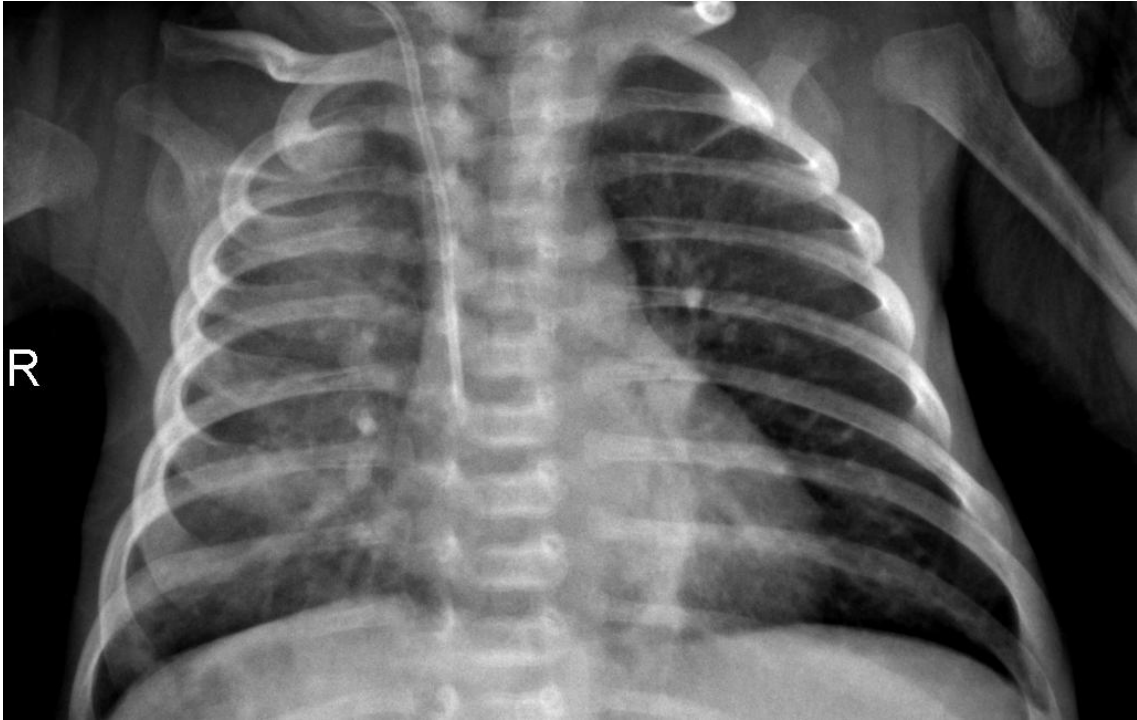

Name: manju

ID: 5555

Age: 25

Gender: O

Exam Date: 2025-02-27

Findings:

FINDINGS:

Chest x-ray reveals moderate ground-glass opacities in the peripheral lung fields, with minimal pleural thickening.

Heart size is normal. Small pleural effusion may be present. Pulmonary vessels show mild congestion.

SIMPLIFIED EXPLANATION:

In simple terms: This is a moderate case requiring careful monitoring and treatment.

The X-ray shows hazy areas outer areas of the lungs, which indicates pneumonia.

This means there is an infection causing inflammation in your lungs.

What this means for you:

- Your pneumonia requires careful monitoring
- Follow your treatment plan strictly
- Watch for any worsening symptoms
- Make sure to get your follow-up X-ray

MEDICAL RECOMMENDATIONS:

1. Clinical correlation with patient's symptoms and laboratory findings.
2. Follow-up imaging after treatment to ensure resolution.
3. Follow-up chest x-ray in 1-2 weeks to monitor progression.
4. Consider additional views if clinically indicated.

Confidence Level: 53.4% (Low confidence - recommend radiologist review)

Primary Condition: Pneumonia

Confidence Level: 53.4%
